TCI ERP user guide

Quick start: Information manager

Version 0.1.0

02.11.2026

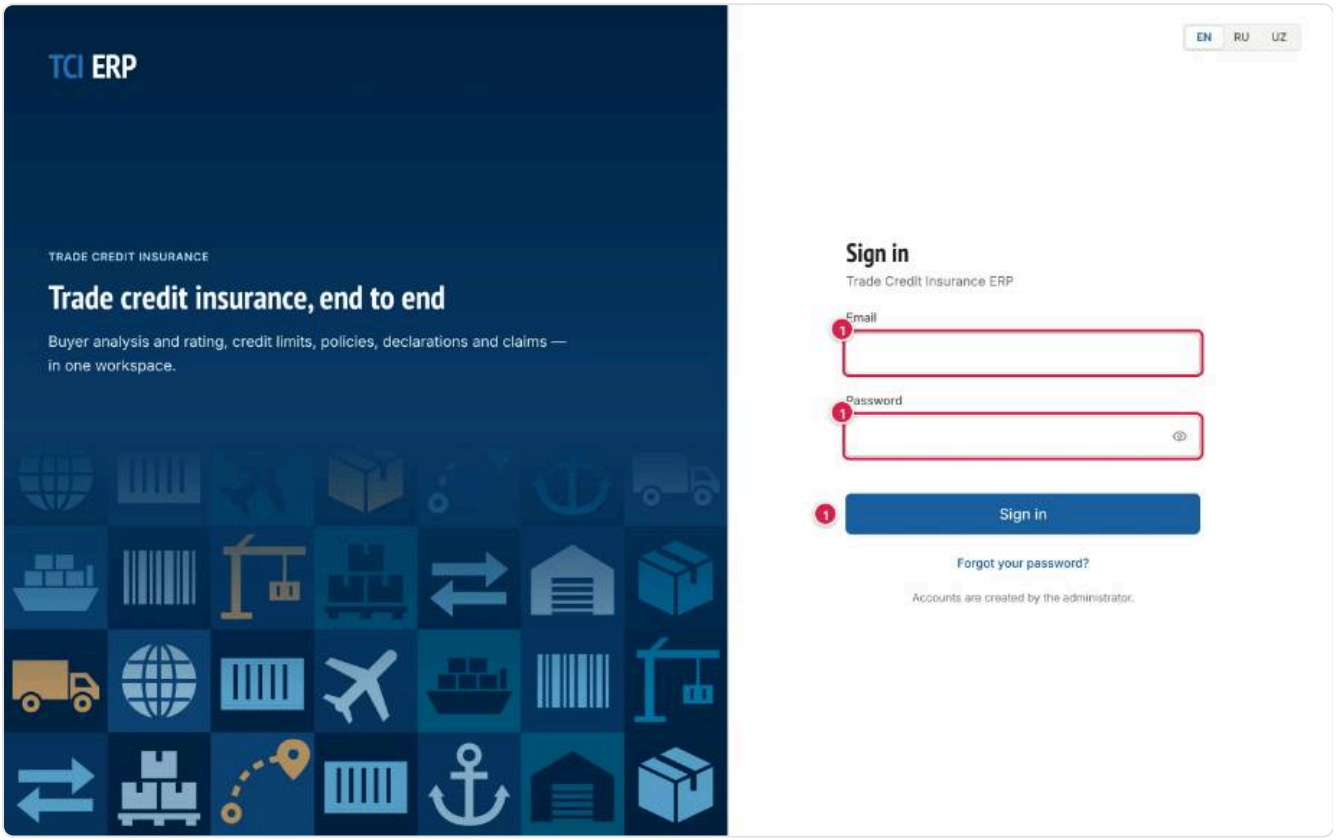

Signing in, password and second factor

When to use it

On your first sign-in, after the administrator resets your password, and whenever the system asks for a second-factor code.

Steps

1. Open the system's address, enter your email and password, then press **Sign in**.

2. The first sign-in uses the temporary password the administrator gave you. The system opens the change-password page straight away: choose your own password — at least 12 characters — and save it. Until the password is changed, no other screen opens.
3. If **Two-factor authentication** is on for your role, enter the 6-digit code from your authenticator app. You connect the app on **My account** (the user menu, top right).
4. After you sign in, the system may tell you about failed sign-in attempts with your email. If it was you, press **This was me**; if not, change your password and tell the administrator.

Result

The dashboard opens in your role's workspace. **My account** holds your password, second factor, your sessions and the display settings.

Common mistakes

- **The password is refused several times in a row.** After a few failed attempts sign-in is paused, and the pause grows with each new failure. Wait for the countdown on the sign-in page to end.

- **"Forgot your password?"** The administrator resets passwords: you receive a temporary password and change it when you sign in.
- **No second-factor code.** Without the authenticator app you cannot sign in — contact the administrator.

The screen: menu, top bar, dashboard

The menu on the left

The menu is grouped by **workspace**. At the top is the workspace switcher, below it "Shared" (**Dashboard**, **Agenda**, **Companies**, **Sanctions**, **Help**), and below that your workspace's own tools. Pin or hide the menu with the button in the top left corner or with `Ctrl`/`⌘` + `B`. A hidden menu appears when you rest the pointer at the left edge of the window.

The top bar

On the left, the name of the open section. In the middle, **the one search field** (see *Search: the one field and Ctrl/⌘ K*). On the right, the «?» button (help for the open page; `F1` does the same), the RU / EN / UZ language switcher and the user menu: the acting role, display settings, **My account** and sign-out.

The dashboard

The dashboard shows work, not a showcase: a strip of key figures (each leads to its screen), your Agenda tasks — the most urgent first — and the signals that are not zero right now.

> Next to the title of almost every page there is a small «?» — it opens the help topic about that very page.

Workspaces and the acting role

A person may hold several roles — say, credit analyst and credit underwriter. But they work **in one role at a time**: this is the *acting role*, and every rule in the database answers for it. Roles do not add up.

How to switch roles

1. Open the **Workspace** switcher at the top of the menu.
2. Pick a workspace: **Commercial underwriting**, **Credit underwriting**, **Credit analysis**, **Sales**, **Claims**, **Data management** or **Administration**.
3. The system tells the server the new role, refreshes the data and opens the workspace's first tool.

The acting role is shown in the user menu, top right. The choice is remembered in the browser and offered at your next sign-in.

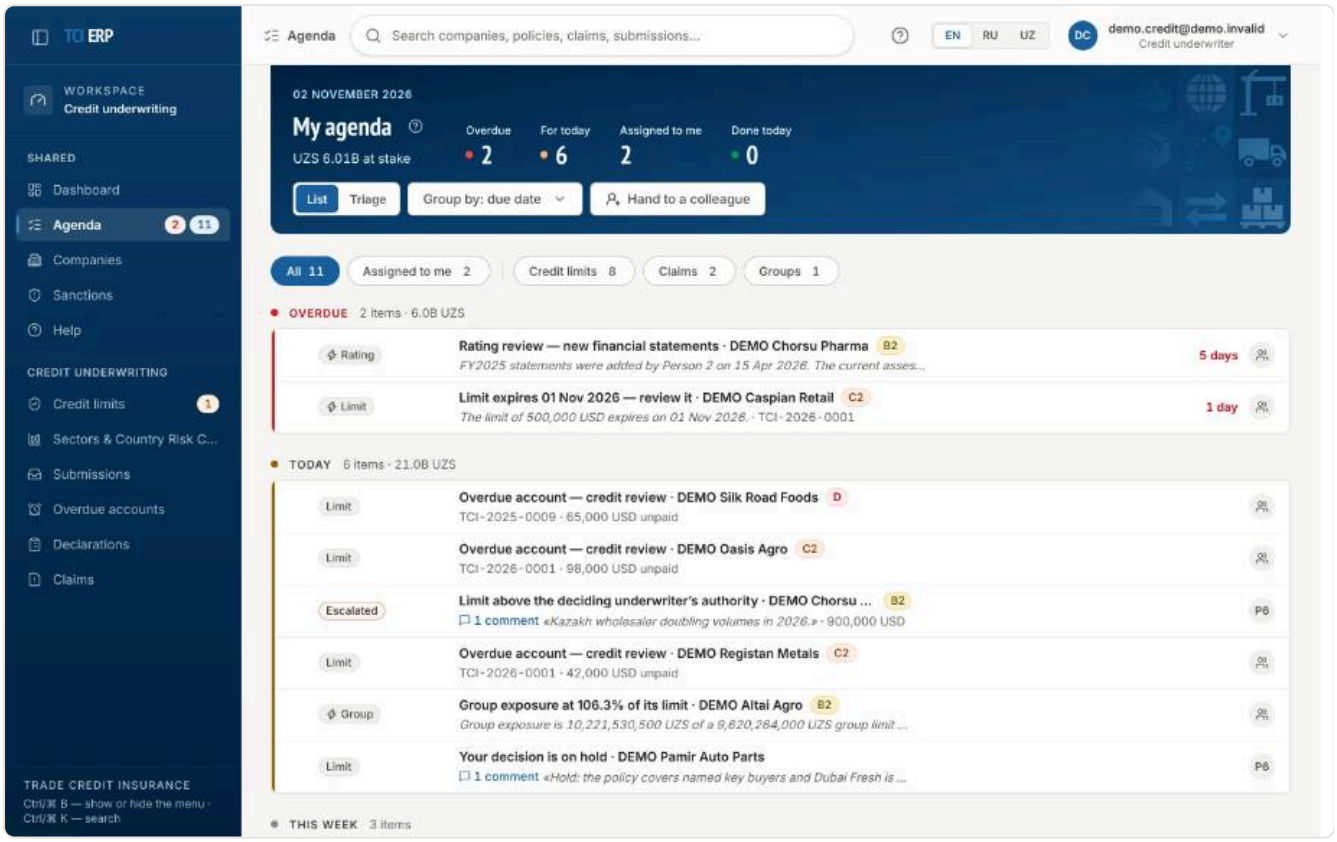

What changes with the role

- **Menu and screens** — only what this role opens.
- **Agenda** — the tasks of this role's department and the tasks addressed to you personally as a member of that department.
- **Buttons** — for example, a credit decision is available only while acting as a credit underwriter.

> If you open a link to a screen the acting role does not have, the system shows "no access" and offers to open it in another role you hold. It never switches the role by itself.

The Agenda: your tasks

My agenda is the work queue. **The system creates the tasks**: when a submission moves to your department, when a limit review falls due, when a policyholder files a declaration. When the work is done — the decision recorded, the rating confirmed — the task closes by itself.

Two views

- **List** — one row per piece of work, grouped by due date, company or type; task-family chips with counts.
- **Triage** — the queue on the left, the selected task on the right: facts, comments, history. The main button takes you to the screen where the task is done (for example, the limit decision form).

What you can do with a task

- **Snooze** — the task hides until the chosen moment and comes back by itself.
- **Hand to a colleague** — one task or many go to an active colleague of the same department, with an optional note. Limit validation steps and rating proposals are never handed on: who answers them is decided by authority.
- **Comment** — stays in the task's history for good.

Keys: `J` / `K` — down/up, `Enter` or `O` — open, `S` — snooze, `C` — comment.

> A task can almost never be closed "by hand": it closes when its reason goes away. The "Done" button exists only on notices after which nothing happens automatically.

Data management

The information manager owns the **company data**: registers companies at colleagues' and clients' request, enters the particulars and financial statements, watches data freshness and clears *information gathering* on limit requests. The workspace is **Data management** (the **Data management** section).

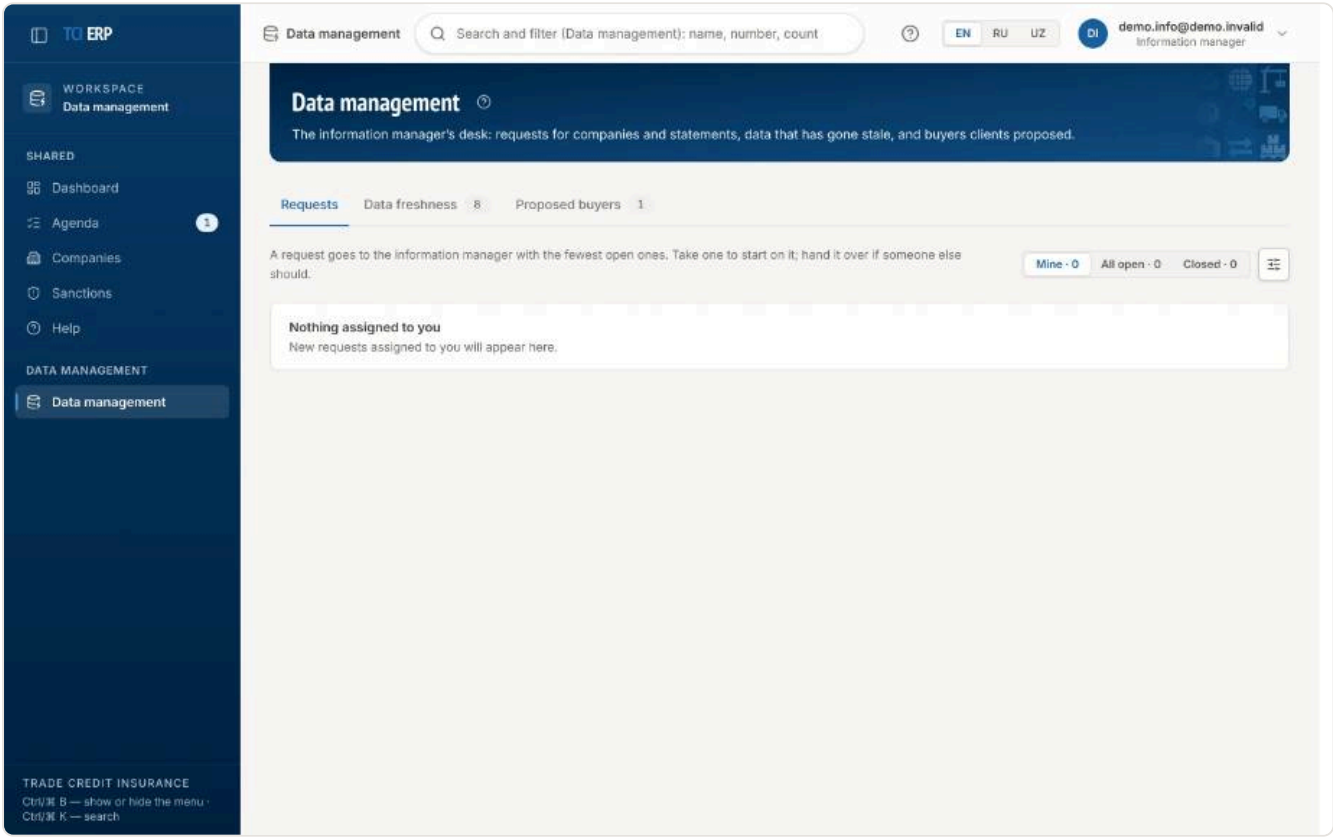

A day in data management

When to use it

Every day.

Steps

1. **Agenda**: a company request, a statements request, a buyer in a submission with no company, a limit request waiting for data.
2. **Data management** › **Requests**: take a request and resolve it (see *Requests for companies and statements*).

3. **Proposed buyers**: buyers clients proposed by name in the portal.
4. **Data freshness**: companies with live business that have no statements, statements older than 15 months, or missing particulars.

Result

Requests resolved, no limit request waiting for data.

Common mistakes

- **Creating a company without checking duplicates.** The form warns about similar names — check them.
